

110104 LC-Display

A friend of yours has just bought a new computer. Before this, the most powerful machine he ever used was a pocket calculator. He is a little disappointed because he liked the LCD display of his calculator more than the screen on his new computer! To make him happy, write a program that prints numbers in LCD display style.

Input

The input file contains several lines, one for each number to be displayed. Each line contains integers s and n , where n is the number to be displayed ($0 \leq n \leq 99,999,999$) and s is the size in which it shall be displayed ($1 \leq s \leq 10$). The input will be terminated by a line containing two zeros, which should not be processed.

Output

Print the numbers specified in the input file in an LCD display-style using s “-” signs for the horizontal segments and s “|” signs for the vertical ones. Each digit occupies exactly $s + 2$ columns and $2s + 3$ rows. Be sure to fill all the white space occupied by the digits with blanks, including the last digit. There must be exactly one column of blanks between two digits.

Output a blank line after each number. You will find an example of each digit in the sample output below.

Sample Input

```
2 12345
3 67890
0 0
```

Sample Output

```

      --  --  --
      |  |  |  |  |
      |  |  |  |  |
      --  --  --  --

      | |      |  |  |  |
      | |      |  |  |  |
      --  --  --  --

      ---  ---  ---  ---  ---
      |      | |  | |  | |  |
      |      | |  | |  | |  |
      |      | |  | |  | |  |
      ---  ---  ---  ---

      | |      | |  |      | |  |
      | |      | |  |      | |  |
      | |      | |  |      | |  |
      ---  ---  ---  ---
```
